

Following is the list of 34 communities that will share \$39,220,410 in federal supplemental funds under the Community Development Block Grant Program:

Village of Avoca **\$729,000**

Avoca was subjected to flooding when heavy rains caused Morrey Creek to overflow its banks. About half of the Village was underwater and the entire community was evacuated on June 12, 2008. The sanitary sewer system was overloaded, causing sewage to backup into residents' homes. The Village's water supply was contaminated by the flood waters which contained sediment, debris and land applied chemicals from the agricultural fields upstream of Avoca.

There are three parts to the flood control project in addition to the improvements that the Village is working on with the DNR, the DOT, the Wisconsin Southern Railroad and the Town of Pulaski. The connection of these 3 elements will form the levee to protect the Village from flooding of Morrey Creek in a 100 year event by confining the flooding to unpopulated areas.

- Reconstruction and elevation of 2,050' of First Street to three feet above the 100-year flood elevation.
- Construction of 1,400 feet of an earthen berm along the right-of-way of Wisconsin Street.
- Construction of 500 feet of an earthen berm along the right-of-way of STH 133.

The recommended funding amount is \$729,000. the Village has already borrowed \$300,000 for clean-up and repair after the Morrey Creek flooding and has committed over \$400,000 for water and sewer system Improvement.

Village of Bayside **\$59,200**

The Village of Bayside was adversely affected by the heavy rains and subsequent flooding and many of the culverts within the Village were overwhelmed, leading to backups and road washouts, affecting nearly 40 homes. The Village proposes to replace broken culverts and restore the ditches to restore the effectiveness of their ditch and culvert system. The recommended funding amount is \$59,200 for the needed repairs to the Village ditch and culvert system.

City of Beaver Dam **\$3,715,191**

In response to the flooding of the Beaver Dam River, the City would like to complete the following:

- Complete a Relocation Plan.
- Acquisition and relocation of 10 of the 11 buildings damaged in the flood.
- Demolish the buildings in the floodway.
- Removal of one culvert and construct a clear river channel with erosion control.
- Remove the other culvert and replace with a single span bridge.
- Construction of a flood wall to protect the 14 businesses in the flood fringe.
- Façade improvements to the front and back of the 14 affected businesses.
- Construct 34 affordable rental units.

The recommended funding amount is \$810,000 for the acquisition of the 10 buildings in the floodway, \$770,000 for the demolition of the buildings, \$95,000 for the Tower Street Culvert, and \$176,000 for the flood wall. With \$1,731,191 for the rental units, and administration, the total is \$3,715,191.

The City has committed \$800,000 for the improvements.

City of Beloit **\$530,000**

The City of Beloit is requesting funds to rip-rap the east bank of the Rock River to protect the telecommunication cables, public water well and nearby businesses. The City also proposes to raise approximately 570' of Shirland Avenue by as much as 3' to maintain the transportation corridor and to protect the nearby residential area from flooding. The recommended funding amount is \$552,585 for the

- MORE -

restoration of the east bank of the Rock River and Shirland Avenue.

Columbia County **\$836,778**

Columbia County is requesting an award to reimburse the County for the 12.5% Local Share of road repair and to assist the Crystal Lake area install a permanent drainage system between the lakes to prevent flooding. The County is also requesting funds on behalf of the Village of Pardeeville which needs to construct a spillway to protect STH 22 and to repair a lift station and forcemain.

Dane County **\$1,296,000**

In June/July of 2008, flood waters entered the sanitary sewer system through the joints of the clay pipe and the manholes once they became submerged. The sewage pump station could not pump enough to entry the collection system and raw sewage backed up into basements. Overflowing sewer water also flowed out of downstream manholes, leaving pools of raw sewage in the Village and into the drainage ditch that is known as the "north Branch" of the Yahara River.

The County proposes to assist the Village of Morrisonville with the rehabilitation of their sanitary sewer system. This would include using PVC for sewer mains and manholes made of concrete with rubber gaskets to provide a good seal.

Town of Dekorra **\$150,000**

In June/July of 2008, many of the steep slopes adjacent to Lake Wisconsin developed channels of concentrated storm water runoff. Flow down these channels gained tremendous energy and scoured mud, sand, rocks and other debris into ditches, roads, private property and into Lake Wisconsin. The Town of Dekorra proposes to have a runoff analysis completed so that suitable corrective measures can be taken to stop the destructive channeling of storm water. These measures include the installation of stone weeper check dams and the stabilization of graded areas.

City of Elroy **\$166,500**

In June/July of 2008, heavy rains caused severe flooding in the City of Elroy. 6 homes were substantially damaged and are participating in the Hazard Mitigation Grant Program. In addition, the City has about \$80,000 in damages to their public infrastructure that need repair. The City is requesting funds for the 12.5% Local Share of the HMGP for 6 homes in the City and repairs to City's power plant and a records retention vault.

City of Fond du Lac **\$550,000**

The City is requesting funds for the 12.5% Local Share of the HMGP for 14 homes in the City plus funds for the buyout of several rental units.

Fond du Lac County **\$200,000**

In June/July of 2008, the Kiel Road Bridge was severely damaged and has been closed and out of service since. After consultation with the DNR and DOT, the County has decided that the bridge needs to be replaced. The closure of this bridge has created traffic delays because of the need to use alternate crossings. This has been especially problematic for emergency response vehicles and school buses. The County proposes to replace the destroyed Kiel Road Bridge with a single-span flat concrete slab bridge in order to restore traffic patterns.

Village of Fox Point **\$75,000**

In June/July of 2008, the Village of Fox Point was subjected to flooding when heavy rains caused flooding down a lake bluff into Lake Michigan. The Village of Fox Point wants to clear the channel at the bottom of the bluff, line it with rip-rap and construct a storm grate over the opening of the stormwater structure to prevent debris from clogging the entrance and the channel.

Village of Gays Mills **\$1,784,250**

As Gays Mills moves forward of their plan to relocate the Village, additional funds are needed to complete the infrastructure work a Community Commerce Center, a combination Fire Station/EMS building, and additional land acquisition. The recommendation is to commit funds for these activities, but allocate them as the activities are implemented.

City of Janesville **\$1,718,876**

In June of 2008, the City of Janesville experienced the largest flood event on record, with the Rock River taking almost 3 weeks to recede to a normal level. 55 homes had to be evacuated in Mole Sadler's subdivision; 12 of those homes were substantially damaged. The Public Library and Senior Center were damaged, as were many of the City's roads. 39 businesses were directly affected by the flood, either because of flooding damages or the loss of power. These losses included real property loss as well as loss of revenue.

The City of Janesville proposes 3 major activities under this grant proposal:

1. Local Match for the Hazard Mitigation Grant Program (\$194,940).
2. Reimbursement for the costs incurred by the City in repairing public utility systems, (\$82,038), road washouts and sinkholes (\$323,171) and repairs to the library and senior center (\$6,537).
3. \$1,000,000 in unspecified assistance for impacted businesses.
4. \$39,264 for housing rehabilitation.
5. \$72,926 for administration costs.

City of Jefferson **\$553,300**

The flooding in the City caused the dikes surrounding the wastewater treatment plant to develop weakness due to the pressure of the water seeping through them – much like the forces that led to the collapse of CTH A in Lake Delton. The pumping station was also compromised and both pumps had to be manually operated to prevent the entire structure from being flooded. There are three parts to this project necessary to repair the damage to the wastewater treatment plant dikes and pumping station:

- Reconstruction and elevation of 3 sides of the perimeter dike by 3 feet to half a foot above the flood stage of last year.
- Construction of a concrete retaining wall on the fourth side.
- Flood proofing of some of the buildings that form part of the barrier.
- Re-construction and elevation of the concrete structure around the pump station and the installation of new pumps.

Jefferson County **\$4,000,000**

In June and July of 2008, heavy rains substantially damaged 34 properties that should be acquired and removed from the floodplain. These are properties that are not part of the County's HMGP Application. The County has also identified 12 businesses that were affected by the flooding. Jefferson County would like to use CDBG-EAP funds to continue their voluntary Flood mitigation acquisition/demolition program and to assist several of the more seriously damaged businesses, especially within the City of Jefferson.

Kenosha County **\$320,108**

The County is requesting funds for the 12.5% Local Share of the HMGP for homes in the County.

Village of Lake Delton **\$302,260**

In June/July of 2008, the Village of Lake Delton was subjected to flooding when heavy rains caused flooding and Lake Delton breached Highway "A". FEMA provided Public Assistance (PA) in 6 of the 7 eligible categories and the Village is requesting reimbursement for the 12.5% Local Share that they had to provide. In addition, the Village made significant repairs to the Lake Delton Dam to increase capacity, to protect the lift station just down stream and to provide improved protection against future flood events.

- Manholes and sewers found to be deficient with be lined.
- Conversion of the existing dry pit-wet well into a duplex submersible pump station. Installation of new grit resistant pumps.
- Replacement of pump power supple, control and recording equipment
- Replacement of 250 feet of 4-inch pipe with 6-inch pipe

Much of this is deferred maintenance as the application itself states and the Village is saving its G.O. capacity for emergencies.

Village of Waterford \$1,108,200

In June/July, 2008, Waterford experienced significant flooding from the Fox River which bisects the Village. The lack of capacity in the pump to move water out of neighborhoods to the Fox River caused storm sewers to back up, flooding homes and commercial properties. Funds are being requested for the 12.5% Local Match for the rehabilitation of damaged public facilities and the creation of a Pumping Station. This is a joint project with the Town of Norway and the Town of Waterford. They are forming a Utility District that will assume the rights of the old farm drainage district so they will have authority over the pump station.

Waukesha County \$4,380,000

In June/July, 2008, Waukesha County sustained substantial damage to county facilities, nine towns, twelve villages and seven cities. Of the \$3,024,938.10 requested, only \$2,700,265.72 was approved by FEMA. The non-reimbursed figures range from a low of \$55.57 to a high of \$33,986.65 that the local units of government will have to bear.

In addition, Waukesha County estimates that there are 438 LMI households still in need of assistance. With an average repair cost of \$7,500, there is a need for over \$3,000,000 in housing assistance. In addition to \$2,200,000 in residential rehab, the proposed funding includes:

| | |
|-----------------------------|-----------|
| Mukwonago Pump Station | \$506,000 |
| Pewaukee Springdale Road | \$256,000 |
| City of Waukesha A/D | \$406,000 |
| Oconomowoc Community Center | \$506,000 |
| Summit Lake Outlet Project | \$506,000 |

City of West Allis \$4,162,000

In June, 2008, the City of West Allis sustained the most private sector damage of any municipality in Milwaukee County. One of the largest impacts was to the Milwaukee Gray Iron Plant which had four feet of standing water, sustaining nearly \$16,000,000 in actual cash value damages. Due to the extent of the damage, the company has not reopened, causing a loss of 80 jobs.

Flooding problems on W. Orchard Street caused homes and businesses to be evacuated and streets closed. Over 1,500 homes were damaged with an average repair cost of \$23,000. FEMA provided \$268,945.01 in Housing Assistance for those residents.

The City has also identified a number of drainage ditches and manholes that were washed out by the flooding. Streets and sidewalks had their base so undermined by the large amounts of water that much of the substructure is unstable.

Proposed funding includes \$1,000,000 for housing rehab, \$50,000 for street repairs and \$3,000,000 towards the purchase of MGI and the Mykonos Buildings (plus \$112,000 in admin).
